

The Movies website project

This project aims to help you delve into web development by creating a dynamic platform for movies.

The solution shall contain all CRUD operations, along with User Login and registration.

Key features :

- 1- **User Registration and Login:** Users can create accounts, log in, and log out securely.
- 2- **Movie Listings:** Display a list of movies with details like title, poster, release year.
- 3- **Movie Details:** Provide a dedicated page for each movie with comprehensive information, reviews, and Cast.

Project Steps

Database Setup: Design the database schema for movies, users, etc.,

Back-end Development: Build the server-side code to handle HTTP requests, implement CRUD operations for movies, and user management.

User Authentication: Develop a secure user registration and login system. Implement password hashing and session management.

API Integration: Integrate with a movie API to fetch movie data, including posters and descriptions.

Front-end Development: Create an intuitive and visually appealing user interface with movie listings, details.

Make sure the solution builds and runs
